

ENTRE_VET PROJECT

Informative newsletter from the third period of the project.

About the project

What is the aim of ENTRE_VET?

ENTRE_VET seeks to collaborate in the European Commission mission to improve entrepreneurial education in the EU. There is currently an imbalance between the expectations of EU recommendations regarding entrepreneurship education, and the realities in EU VET schools, where there is a need for tools that support the inclusion of entrepreneurship competences in VET education.

Following this need, ENTRE_VET seeks to produce materials to help achieve the aims of the Osnabrück Declaration. The project will complement the competences officially stated by each EU country in the VET curricula. VET trainers have a key role in the acknowledgement, interest and understanding of entrepreneurship by their students. They can help them participate in the needed change of the EU economy towards a more resilient, entrepreneurial network.

Transnational project meeting 2

Partners met Bratislava, Slovakia

On 19-20 February 2025, the EntreVET partners met in Bratislava, Slovakia for the second Transnational Project Meeting. During the two days, partners shared updates about the project and worked on the development of new learning modules. The group also looked at the first version of the EntreVET online platform. There were discussions about quality, feedback, and the next steps for the project. This meeting helped partners to exchange experiences and ideas, and to make the project outputs even stronger.

The EntreVET e-Learning Platform

One of the main results of the EntreVET project is the online learning platform with courses for teachers and trainers in vocational education. The goal is to support schools in teaching entrepreneurship in a practical way. 🖱️ You can already visit the platform here: <https://elearning.entre-vet.eu>

What is on the platform?

The platform includes different courses (modules) that focus on the main skills of entrepreneurship.

Each module contains explanations, exercises, and tools that teachers can use directly in the classroom.

Why use it?

- The materials are free of charge and open to everyone.
- They are designed for teachers and trainers, with ready-to-use activities.
- The platform is flexible: you can use a whole module or just one exercise.
- It helps students gain practical skills that they can use in their future jobs or businesses.

The courses are now almost finished. Soon, the complete set of modules will be ready for use in schools. Teachers and trainers will have access to a clear, modern, and useful resource for bringing entrepreneurship into their lessons.
