Informative newsletter from the final period of the project.

Transnational Partner Meeting in Valencia, Spain

Our third and last Transnational Project Meeting in Valencia was a major milestone for the ENTRE_VET team. Hosted at the Mediterraneo Culinary Center, the meeting focused on moving the project into its final, high-impact phase.

Our discussions centered on the launch of the ENTREVET digital learning platform. We've set a strategy to have all language versions live, ensuring the tool is ready for students to test by the end of 2025. We also planned our Multiplier Events, identified and planned tackling of platform bugs, and specified measures to strengthen our social media presence, thanks to which the collaborative sessions in Valencia were very productive. We left Spain with a clear roadmap and a shared energy, ready to tackle the final reporting and ensure the project's results truly support the next generation of VET entrepreneurs.

Second Round of Workshops

By December 2025, VET partners of the consortium organised a second round of entrepreneurship workshop. These workshops, aimed at encouraging entrepreneurship mindsets of the participating VET students, built upon our experience from the needs assessment of entrepreneurial skills, as well as on the first round of workshops organised by partners in the previous year. Focus was on practical, hands-on presentation of entrepreneurship and on the realities of self-employment. Post-survey results revealed a strong openness to future business ownership, with two-thirds of participants from multiple countries considering taking the leap.

Multiplier Events

In addition to the student workshops, the final months of 2025 were a busy period for our Multiplier Events across Europe. These sessions brought together a diverse group of VET teachers, mentors, and educators to explore how the ENTRE_VET tools can be integrated into vocational curricula.

The events served as a collaborative platform where partners demonstrated the project's digital learning resources and gathered expert feedback from those on the front lines of education. By sharing best practices and discussing the challenges of teaching entrepreneurship in the craft sector, these events helped build a strong community of educators dedicated to fostering a business mindset in their students. The enthusiasm from participants confirmed the high demand for practical, industry-specific training materials, setting a solid foundation for the project's long-term impact in the classroom.

Launch of ENTRE_VET Platform

We are thrilled to announce that we have reached the finish line in developing ENTRE_VET E-learning! Accessible via entre-vet.eu, this digital hub is designed to bridge the gap between vocational training and business ownership. The platform hosts our comprehensive micro-learning courses, specifically tailored to help VET students navigate the complexities of entrepreneurship - from business models and branding to financial management and sustainability.

To ensure maximum accessibility, the platform is fully localized and available in six languages: English, Estonian, Spanish, Greek, Slovak, Dutch (Belgium) and German. This tool offers students a flexible, digital path to supplement their practical training, allowing them to build the "entrepreneurial mindset" necessary for today's labor market. We invite VET students, teachers, and future entrepreneurs to explore the modules and take the next step in their professional journey!
